PROFESSIONAL SUMMARY

Full-stack software developer specializing in React, Next.js, and Python/FastAPI, with experience shipping production-grade, security-conscious applications across health-tech, sustainability, digital privacy, and B2B sales platforms. Currently co-founding and leading frontend engineering for a B2B sales automation startup, building on a 12-month internship delivering client websites end to end. Multiple hackathon wins and podium finishes, including a 1st-place national win and a 2nd-place finish among 100+ teams, demonstrate the ability to design and ship secure, functional products in sprints as short as 12 hours. Pursuing CompTIA Security+ to deepen expertise in secure coding and vulnerability management.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript, React, Next.js, React Native, Python , java

Backend & APIs: Fast API, Spring boot , Node.js, RESTful API design, authentication and authorization flows

Tools: vs code, cursor, Figma

Cloud & Infrastructure: AWS (Lambda, DynamoDB, Amplify, API Gateway), Git/GitHub, Expo, Linux

Security-Aware Development: Secure authentication design, AES-256 encryption, zero-knowledge privacy protocols, network security fundamentals (CompTIA Security+ in progress)

CERTIFICATIONS

CompTIA Security+ (In Progress)
Completing coursework in network security, threat and vulnerability management, and application, data, and hosting security to strengthen secure development practices.

WORK EXPERIENCE

Salesfunnel (Startup) | Lagos, Nigeria
Core Engineer / Co-Founder | *February 2026 - Present (Contract)*

- Co-founded a B2B sales automation startup and lead frontend engineering, architecting a modular, mobile-first React frontend with high-performance state management to streamline lead management and CRM integration.
- Build and integrate FastAPI backend endpoints for authentication, complex data relationships, and real-time business analytics, maintaining secure, seamless connectivity between frontend and backend.
- Shape the technical roadmap and security protocols guiding the platform through its initial market entry.

Belsoft Systems | Abuja, Nigeria
Frontend Developer Intern | *January 2025 - January 2026*

- Independently architected and deployed 2 client websites end to end, from wireframing through production, following professional coding standards and senior-led code review.
- Optimized frontend architecture in React to improve site speed and scalability across client-facing platforms.
- Translated complex UI/UX designs into production-ready code while applying front-end security best practices, and collaborated cross-functionally to build and maintain internal tools supporting enterprise-level workflows.

SELECTED PROJECTS

Campus EV | *React, AWS (Amplify, Lambda, DynamoDB), Python*

- Designed and built a serverless sustainability application evaluating university campus readiness for electric vehicle infrastructure, pairing a React frontend on AWS Amplify with API Gateway for secure, low-latency REST routing.
- Built the backend on AWS Lambda to run analytical models and AI integrations, using DynamoDB as a high-throughput data store for simulated vehicle fleet and charging-bay demand metrics.
- Shipped a fully operational prototype in a 12-hour sprint at the AI Infrastructure Hackathon, placing in the Top 5.

Nigeria Celebrates | *React, TypeScript, FastAPI*

- Co-developed a real-time social platform for live talent and trivia content, building a responsive React and TypeScript frontend to support live content feeds and user engagement.
- Integrated a FastAPI backend engineered to handle high user concurrency during live events.
- Won 1st Place among national competitors at the Nigeria at 66 hackathon, hosted by DE Global Ambassadors.

Data Ghost | *React, Python (Backend)*

- Built the frontend for a two-person team's Digital Will application securing and transferring digital assets after death, implementing zero-knowledge privacy protocols and AES-256 encryption to protect sensitive user data.
- Won 2nd Place out of 100+ competing teams at the Code for Privacy Hackathon, hosted by ISACA.

CheckMed | *React, FastAPI*

- Built the frontend for a drug authenticity verification platform combating counterfeit medicine in Nigeria, integrating FastAPI endpoints to handle real-time verification requests.
- Delivered a functional prototype in a 48-hour build sprint at the National AI Hackathon.

Log AI | logai.online | *Creator & Lead Developer*

- Built and deployed an active AI-powered SaaS platform supporting 200+ users, automating academic internship documentation including SIWES daily log entries, technical reports, and presentation slides.
- Designed an intuitive, responsive web interface integrated with AI generation endpoints to streamline student documentation workflows.

AWARDS & ACCOMPLISHMENTS

- 1st Place, Nigeria at 66 Hackathon, hosted by DE Global Ambassadors
- 2nd Place (100+ teams), Code for Privacy Hackathon, hosted by ISACA
- Top 5 Finisher, AI Infrastructure Hackathon
- 2nd Place (International), Global Climate Action Challenge, for co-engineering a Biomass Gasification Burner. Award presented by Dr. Ngozi Okonjo-Iweala, Director-General of the World Trade Organization.

EDUCATION

African University of Science and Technology (AUST) | Abuja, Nigeria
Bachelor of Science in Computer Science | *Expected October 2028*

- Member, AUST Inspire (University Entrepreneurship Department)
- Represented the university in national technology and security hackathons

LANGUAGES & INTERESTS

Languages: English (Fluent)

Interests: Photography, UI/UX Design, Chess, Cybersecurity Research , Ui design
